                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE by Dypetides capable of binding with each other, monitoring the interaction between these polypeptides, and determining if the test agent interaction between these polypeptides, and determining if the test agent caute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas, carriers and in neoplastic (e.g. glioblastomas, carriers have many be carriable, keloid formation, fibrocystic conditions, tissue thypertrophy) of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may be useful in treating Nogo-associated diseases. The modulators of Nogo or BACE polypeptides, and the polynucleotide encoding the BACE polypeptide are useful in expensive to the modulation of a patient suffering from this capacitation of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading of a cancer. The polynucleotide may also be an essential component in assays, a probe, in recombinant protein synthesis, and in gene therapy contining the internation of the modulation of degree represents the human Nogoh
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SPLSAAAVSPSKLPEDDEPPARPPPPPASVSPQAEPVWTPPAPAPAPPSTPAAPKRG 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          226

degeneration in the Promoting nerve regeneration and preventing neuronal degeneratior central/peripheral nervous system from injury/disease, comprises administering nervous system-specific activated T cells/antigen, analogs/peptides

Ą

Mosonego

Page 53-56; 93pp; English.

The invention relates to promoting nerve regeneration or conferring neuroprotection and preventing or inhibiting neuronal degeneration in the central peripheral nervous system (NS). The method involves administering NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt crauma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or damages caused by surgery such as tumour excision. The disease is not autoimmune disease or neoplasm. The disease results in a degenerative continuance disease or neoplasm. The disease results in a degenerative continuance in the gray or white matter or both. The disease is disease, facial nerve (Bell's) palsy, glaucoma, Huntington's chorea, amyotrophic lateral sclerosis, non-arteritic optic neuropathy, and vitamin deficiency, intervertebral disease, including but not limited the neuropathies associated with various diseases including but not limited the neuropathies associated with various diseases including but not limited the neuropathies associated with various diseases including but not limited the neuropathies associated with various diseases including but not limited the neuropathies associated with various diseases including but not limited the neuropathies associated with various diseases including but not limited the neuropathies associated with various diseases including but not limited the neuropathies associated with various diseases. pathies, complications of various drugs (e.g., metronidazole) and toxins (e.g., alcohol or organophosphates), Charcot-Marie-Tooth disease, ataxia telangectasia, Friedreich's ataxia, amyloid polyneuropathies, adrenomyeloneuropathy, Giant axonal neuropathy, Refsum's disease, Fabry's disease, or lipoproteinemia. The present sequence represents the human neurotransmitter receptor protein Nogo-A, an example of NS-specific to uremia, porphyria, hypoglycemia, Sjorgren Larsson syndrome, acute sensory neuropethy, chronic ataxic neuropethy, biliary cirrhosis, primary amyloidosis, obstructive lung diseases, acromegaly, malabsorption syndromes, polycythemia vera, immunoglobulin (19)A- and 19G gamma-

A composition of the invention has neuroprotective activity, and may have a use in gene therapy. The composition is useful for treating injury to or disease of the CNS, e.g. spinal cord injury, multiple solerosis, epilepsy or stroke. The present sequence represents human Nogo-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a myelin-associated glycoprotein (MAG)

derivative comprising a mutation in or flanking MAG Ig-like domain 5

(Igd5), excluding the MAG derivative MAG (da-1)-Fc, where the mutation

reduces or eliminates the ability of the derivative to regulate neurite

outgrowth as compared to endogenous or soluble MAG without eliminating

to binding to neuronal surfaces. The inhibitors of MAG are useful for

promoting neural degeneration associated with injuries, disorders, or

treating neural degeneration associated with injuries, disorders, or

diseases. The disorder, disease, or condition is associated with

c apoptosis or results from a demyelinating disease and includes

amylotrophic lateral sclerosis, Alzheiner's disease, Parkinson's disease,

Huntington's disease, multiple sclerosis, Creutzfeldt-Jacob disease,

kuru, multiple system atrophy, amylotrophic lateral sclerosis (Lou

Gehrig's disease), or progressive supranuclear palsy. The present

sequence represents the amino acid sequence of human NOGO-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene crelative to expression of the gene relative to expression of the gene relative to expression of the gene relative to expression of the gene relative to expression of the gene relative to expression of the gene relative to expression of the gene relative to expression of the agent and identifying fat cell mumber or size in the subject comprises a mammal, preferably a human. The collypeptide to the agent, detecting binding of the agent to the polypeptide and an agent, exposing the polypeptide to a change in an activity of the polypeptide, treating a subject of a changes in an activity of the polypeptide, treating a cumber or size comprises an antibody. A method of regulating fat cell number or size comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the comprise providing a useful for identifying compounds that influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents a human polypeptide used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                              polypeptide having BACE1 activity, useful in preparing a composition treating amyloidosis or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated polypeptide having BACE1 activity. The protein is useful in preparing a composition for treating amyloidosis or Alzheimer's disease. This sequence corresponds to the RTM-4A protein.
                                                                                           therapy; BACE1 activity; RTN4; RTN3; amyloidosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AGLSAAPVPTAPAAGAPLMDFGNDFVPPAPRGPLPAAPPVAPERQPSWDPSPVSSTVPAP

                                                                                                                                                                                                                                                                                                            ठे
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                 The present invention relates to an isolated truncated Nogo-A polypeptide that corresponds to a truncated form of the Nogo-A protein from the rat and from the human. The truncated polypeptide is useful for identifying a compound having detectable affinity to a Nogo-A protein. The present sequence is a Nogo-A polypeptide of the invention.
                                                                        New isolated truncated Nogo-A polypeptide that corresponds to a truncated form of the Nogo-A protein, useful for identifying a compound having detectable affinity to a Nogo-A protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

for genetic The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or Human, vaccination, gene therapy, nutritional supplement; stem cell proliferation, haematopoiesis, nerve tissue regeneration, immune suppression, immune stimulation, anti-inflammatory, leukaemia. human polypeptides, useful in

tendon
physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention

Sequence 8859, Application US/09949016

Patent No. 6812339

GENERAL INCORPARATION:

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WINHER: US/09/949,016

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/231,758

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR PILING DATE: 2000-09-08

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012
                                                                                                                                                                                                                              Sequence 5000, Application US/09513999C

Sequence 5000, Application US/09513999C

Sequence 5000, Application US/09513999C

GENERAL INFORMATION:
APPLICANT: Dunas Milne Edwards, J.B.
APPLICANT: Duclert, A.
TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.
FILE REFERENCE: 59.US2.REG
CURRENT APPLICATION NUMBER: US/09/513,999C
CURRENT FILING DATE: 2000-02-24
PRIOR PLICATION NUMBER: US 60/122,487
PRIOR FILING DATE: 1999-02-26
NUMBER OF SEQ ID NOS: 36681

Isoform 2 is widely expressed excepted for the liver. Isoform 3 is expressed in brain, skeletal muscle and adipocytes. Isoform 4 is testis-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          block the regeneration of the nervous central system in adults. Isoform 2 reduces the anti-apoptotic activity of Bcl-xl and Bcl-2. This is likely consecutive to their change in subcellular location, from the mitochondria to the endoplasmic reticulum, after binding and sequestration.

SUBDAT: Binds to RTM4R. Interacts with Bcl-xl and Bcl-xl SUBCELJULAR LOCATION: Integral membrane protein. Endoplasmic reticulum and control to the membrane of the endoplasmic reticulum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   regeneration.";
